TG Therapeutics, Inc. Announces Clinical Data Presentations at the Upcoming 21st European Hematology Association Annual Congress

Presentations demonstrate the safety and efficacy of TGR-1202 in combination with ublituximab as well as in combination with ibrutinib in patients with CLL and NHL

NEW YORK, May 20, 2016 (GLOBE NEWSWIRE) -- TG Therapeutics, Inc. (Nasdaq:TGTX), today announced that updated data has been selected for presentation at the upcoming 21st European Hematology Association (EHA) Annual Congress, to be held from June 9 - 12, 2016 in Copenhagen, Denmark.

Presentations Include:

- Title: Long-term follow-up of the next generation PI3K-delta inhibitor TGR-1202 demonstrates safety and high response rates in CLL: Integrated-analysis of TGR-1202 monotherapy and combined with ublituximab
 - Abstract Number: P207
 - Presentation Date & Time: Friday, June 10, 2016 5:15PM 6:45PM CEST
 - Location: Poster Hall H
 - i Presenter: Anthony Mato, MD, University of Pennsylvania, Philadelphia, PA
- Title: Long-term follow-up of the next generation PI3Kδ inhibitor TGR-1202 demonstrates safety and high response rates in NHL: Integrated-analysis of TGR-1202 monotherapy and combined with ublituximab
 - Abstract Number: P315
 - Presentation Date & Time: Friday, June 10, 2016 5:15PM 6:45PM CEST
 - Location: Poster Hall H
 - Presenter: Owen A. O'Connor, MD, PhD, Columbia University Medical Center, NY, NY
- Title: Preliminary results of a Phase I/Ib study of ibrutinib in combination with TGR-1202 in patients with relapsed/refractory CLL or MCL
 - Abstract Number: E1053
 - E-poster Presentation
 - Presenter: Matthew S. Davids MD, Dana-Farber Cancer Institute, Boston, MA

A copy of the EHA abstracts were made available yesterday, May 19, 2016 through the EHA meeting website at www.ehaweb.org. Following each presentation, the data presented will be available on the Publications page, located within the Pipeline section, of the Company's website at www.tgtherapeutics.com.

ABOUT TG THERAPEUTICS, INC.

TG Therapeutics is a biopharmaceutical company focused on the acquisition, development and commercialization of novel treatments for B-cell malignancies and autoimmune diseases. Currently, the company is developing two therapies targeting hematological malignancies and autoimmune diseases. TG-1101 (ublituximab) is a novel, glycoengineered monoclonal antibody that targets a specific and unique epitope on the CD20 antigen found on mature B-lymphocytes. TG Therapeutics is also developing TGR-1202, an orally available PI3K delta inhibitor. The delta isoform of PI3K is strongly expressed in cells of hematopoietic origin and is believed to be important in the proliferation and survival of B-lymphocytes. Both TG-1101 and

TGR-1202 are in clinical development for patients with hematologic malignancies, with TG-1101 recently entering clinical development for autoimmune disorders. The Company also has pre-clinical programs to develop IRAK4 inhibitors, and anti-PD-L1 and anti-GITR antibodies. TG Therapeutics is headquartered in New York City.

Cautionary Statement

Some of the statements included in this press release, particularly those with respect to anticipating future clinical trials, the timing of commencing or completing such trials and business prospects for TG-1101, TGR-1202, the IRAK4 inhibitor program, and the anti-PD-L1 and anti-GITR antibodies may be forward-looking statements that involve a number of risks and uncertainties. For those statements, we claim the protection of the safe harbor for forward-looking statements

contained in the Private Securities Litigation Reform Act of 1995. Among the factors that could cause our actual results to differ materially are the following: our ability to successfully and cost-effectively complete pre-clinical and clinical trials for TG-1101, TGR-1202, the IRAK4 inhibitor program and the anti-PD-L1 and anti-GITR antibodies; the risk that early preclinical and clinical results that supported our decision to move forward with TG-1101, TGR-1202, the IRAK4 inhibitor program and the anti-PD-L1 and anti-GITR antibodies will not be reproduced in additional patients or in future studies: the risk that trends observed which underlie certain assumptions of future performance of TGR-1202 will not continue, the risk that TGR-1202 will not produce satisfactory safety and efficacy results to warrant further development following the completion of the current Phase 1 study; the risk that the combination of TG-1101 and TGR-1202, referred to as TG-1303, will not prove to be a safe and efficacious backbone for triple and guad combination therapies; the risk that the data (both safety and efficacy) from future clinical trials will not coincide with the data produced from prior pre-clinical and clinical trials; the risk that trials will take longer to enroll than expected; our ability to achieve the milestones we project over the next year; our ability to manage our cash in line with our projections, and other risk factors identified from time to time in our reports filed with the Securities and Exchange Commission. Any forward-looking statements set forth in this press release speak only as of the date of this press release. We do not undertake to update any of these forward-looking statements to reflect events or circumstances that occur after the date hereof. This press release and prior releases are available at www.tgtherapeutics.com. The information found on our website is not incorporated by reference into this press release and is included for reference purposes only.
